

Utilis Multichannel

Sustainable Strength You Need

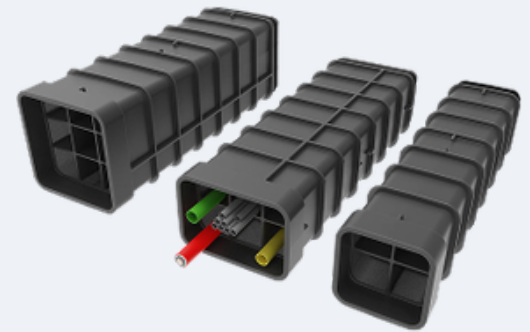

The Utilis Multichannel System delivers durable, sustainable cable protection that prevents entanglement and supports future expansion. Made from high-strength recycled materials, its unparalleled strength and multi-compartment design minimize damage, disruption, and excavation costs.

Why Utilis is the Best Choice

- Save significant space by using a multi-compartment solution, reducing space requirements by up to 40% compared to installing separate Ø110 mm conduits.
- Lightweight design for easy installation by hand without extra tools, meeting ergonomic standards.
- Quick and easy connection as socket and spigot ends link together effortlessly for fast installation.
- Built-in flexibility with two degrees of angular rotation for gentle curves without additional fittings.
- Exceptional strength over 17 times stronger than an SN8 conduit, ideal for heavy traffic loads in shallow installations at airports, railway stations, inner cities, ports, and industrial sites.
- Sustainable choice made from 100% recyclable material and designed for long life thanks to its strength.
- Perfect compatibility with Crosscube chambers, ensuring cables remain protected yet accessible for inspection, maintenance, and upgrades.
